The Huge African-American Gender Gap in Graduate Degree Programs

As reported in last week's JBHE edition, new data from the U.S. Department of Education shows that in 2009, there were 342,400 African Americans enrolled in graduate programs in the United States. But when broken down by gender, the enrollment statistics are shocking. There were 243,600 black women enrolled in graduate programs, compared to 90,500 black men. Thus, women accounted for a whopping 71.1 percent of all African-American graduate school enrollments.

For whites in 2009, women were 59.6 percent of total graduate school enrollments. Ten years earlier in 2000, black women made up 67.5 percent of all African-American graduate enrollments. For whites the figure was 57.8 percent.

Are you a size 8 now? If you are like most Americans, in 15 years you could be a size 14 or 16! The average American woman gains 30 pounds between the ages of 18 and 35. Not only does this mean larger clothes but a greater risk for developing significant health problems (high blood pressure, diabetes, high cholesterol, joint pain). No matter what your size is now or whether you are currently at a healthy weight or overweight, you may be at risk for becoming overweight or obese. That doesn't have to happen to you. Sign up for SNAP!

Researchers at the University of North Carolina at Chapel Hill are studying novel approaches to preventing this weight gain. We are seeking volunteers to enroll in a cutting edge research study that applies proven strategies to target weight gain prevention in young adults.
Go to www.snapstudy.org for more information and to find out if you may be eligible. This study is funded by the National Institutes of Health. The study has been reviewed and approved by the Public Health Nursing IRB (Study # 07-1783) 11/2/10
