Geography

# Project Background and Goals

- **Background:** The methodology used in this project is Photovoice. One of the innovative aspects of Photovoice is that it entrusts cameras to people at the grassroots level whose voices frequently go unheard and whose perspectives are often disregarded.
- **Goals:**
  - 1) To understand the types of health and social education that shape the lives of slum children in Hyderabad through photojournalism.
  - 2) The second goal of this project is to analyze the photos and, in partnering with Mahita's coordinators and educators, establish ways of incorporating the lifestyle of the children into the traditional teaching curriculum of the SMILE schools.

# Results

- Part 1 (above) was successful in highlighting various issues expressed by the youth, and Part 2 of the project will continue into the fall semester as I continue to communicate with Mahita coordinators.
