

1
determined scientist.

2,200
square miles
of healthier waters.

Professor Hans Paerl knows the vitality of our coast depends on clean water in Pamlico Sound. That's why he and his team at the UNC-Chapel Hill Institute of Marine Sciences created FerryMon, the nation's first water quality-monitoring system that uses ferries to collect data. Professor Paerl's research explains the effects of storms and human activity on the sound, helping us maintain a vibrant coastline. That's just one of the ways UNC-Chapel Hill is improving the environment and the economy in North Carolina. **Isn't it amazing what one can do?**
