

The tables below show the number of students graduating between 1999-2004 receiving different levels of distinction using the current GPA method and the AI method broken down by academic major. The breakdown uses the first of the two data fields that represent students' majors. Thus, the breakdown does not include information about the second major of students with two majors, nor does it take into account why one major was listed ahead of the other. The first table shows those majors in which at least 20 students changed distinction status as a function of the method. The second table lists the remaining majors.
